

PERMANENT EYELINER AFTER-CARE INSTRUCTIONS

PLEASE READ CAREFULLY BEFORE BOOKING YOUR APPOINTMENT. NOT ADHERING TO THESE INSTRUCTIONS CAN IMPACT YOUR HEALED RESULTS.

- Wash off any pigment residue with mild soap right after the procedure. Pat dry gently with a clean tissue.
- Gently wash the skin around the eyes 2x a day using your fingers. Pat dry with a clean tissue and apply ointment for up to 7 days after the treatment.
- **DO NOT PEEL OR PICK THE SCABS** - scabs will take about 7-10 days to peel off.
- Do not massage, itch, or rub the eyes.
- Swelling, stinging, and redness are expected and normal in the first few days after the treatment. Applying a cold pack and exercising your eyes (blinking actively for 2 min.) will help reduce the swelling.
- No makeup is allowed on the eye area until the scabs are completely gone.
- Avoid sweaty exercise, saunas, facials, swimming, and sun tanning until the skin is completely healed.
- The color will fade about 30%-50% after the scabs fall off. Do not feel discouraged, just trust the process. We will perfect everything at your touch-up appointment.
